forces? - Quora Forces are vectors and as such, any operation that can be
performed on vectors can be performed on force vectors. The resolution of vectors
is one such operation. The method of resolving force vectors into their x- and y-
components is discussed in great detail. Resolution of Forces - Physics Resolution
of Forces • A single force can be broken into two separate components. The two

components can be determined by using the triangle rule. Force F can be replaced by F_A and F_B that form the parallelogram rule. It is the reverse of resultant, that produce the same effect.

Force Composition of Forces. Net force (also known as resultant force) is the overall force acting on an object when all the individual forces acting on the object are added together. The net force is a vector produced when two or more forces act on a single object. It is calculated by vector addition of the force vectors acting on the object.

- **Composition of Forces** Composition and Resolution of Forces. In the last unit, you learned that a force causes a change in motion of an object. Forces can be balanced or unbalanced. A free body diagram helps to analyze a situation. It is used to analyze only the forces affecting the motion of a single object. Such forces include the normal force or the weight of an object. Free body diagrams are constructed and analyzed just like other vector diagrams.

Resolution of Forces Resolution of Forces is the method in which process of breaking a force into the two components, basically horizontal and vertical components. On the other hand, also we can say that process of substituting a force by its components so that the net effect on body remains same it is called resolution of a force.
