Plus there are THREE Activities, a Study G Digestive And Excretory System Worksheet | Teachers Pay ... Digestive and Excretory Systems. An insect uses its digestive system to extract nutrients and other substances from the food it consumes. Most of this food is ingested in the form of macromolecules and other complex substances (such as proteins, polysaccharides, fats, nucleic acids, etc.) which must be broken down by catabolic reactions into smaller molecules (i.e. amino acids, simple sugars, etc.) before being used by cells of the body for energy, growth, or reproduction. Digestive and Excretory Systems - Nc State University Explain the difference between the waste produced in the excretory and digestive systems. The Excretory System produces urea, carbon dioxide, water vapor, heat, and salts. While the Digestive System is just getting rid of undigested food. Excretory waste is produced by cells, and digestive waste is just food that isn't

processed. Digestive System Review Packet Questions and Study Guide ... The Digestive System - The human body requires six types of nutrients. The digestive system helps deliver these nutrients to the rest of the body, in a form that the body's cells can use. - The digestive system has 3 jobs: - It breaks down food into molecules the body can use. THE HUMAN BODY SYSTEMS The Digestive System (& Nutrition) Nutrients are the molecules that living organisms need to grow and survive. There are six essential nutrients that your body needs on a daily basis. We get these nutrients from the foods we eat. Digestion is a process that breaks down the foods that we eat into nutrients - molecules small enough to be absorbed (taken in) by cells.
