Let A be a finitely ... Robin Hartshorne's Algebraic Geometry Solutions The goal of this book is to eventually provide a complete, correct, central set of solutions to the exercises in Hartshorne's graduate textbook "Algebraic Geometry". There are many exercises which appear in EGA and a secondary goal would be to have references to all of these. ... All of Chapter IV; All of Chapter V; Solutions to be transferred ... Let G be any sheaf and let F be the presheaf $U \rightarrow A$, and suppose $\phi: F \rightarrow G$. Let $f \in A(U)$, i.e. $f: U \rightarrow A$ is a continuous map. Write $U = \bigcup V_\alpha$ with V_α the connected components of U so $f(V_\alpha) = a_\alpha \in A$. Then we get $b_\alpha = \phi(V_\alpha)(a_\alpha)$ since $F(U) = A$ for any U , Chapter 2 Hartshorne, Chapter 1 Answers to exercises. REB 1994 2.1 is homogeneous and so defines a cone in A^{n+1} . f vanishes on all the elements of this cone (including 0 as f has positive degree) so $f^q = 0$ for some $q > 0$ by the usual Nullstellensatz. 2.2 (iii) implies (i) is trivial as $x^d = 0$. The In §3 we study the behavior of a surface and the curves on it under a single monoidal transformation, which is blowing up a point. Then in §5 we prove the theorem of factorization of a birational morphism into monoidal transformations, and prove Castelnuovo's criterion for contracting an exceptional curve of the first kind. Geometry Solutions to Hartshorne. Below are many of my typeset solutions to the exercises in chapters 2,3 and 4 of Hartshorne's "Algebraic Geometry." I spent the summer of 2004 working through these problems as a means to study for my Prelim. In preparing these notes, I found the following sources helpful: William Stein's notes and solutions Bryden Cais's scans and notes - University of Arizona You will also find my chapter II homework solutions here. Read at your own risk, of course :) Notes from Hartshorne's course -- mainly Chapter 3 and 4 of Hartshorne's book. hartnotes.pdf [2010 May 19] hartnotes.dvi [1996 Aug 15] hartnotes.ps.gz [1999 June 10] hartnotes.tex [1996 May 10] Selected problems from Chapters II and III of Hartshorne's ... Algebraic Geometry Robin Hartshorne's Algebraic Geometry Solutions by Jinhyun Park Chapter III Section 10 Smooth morphisms 10.1. Over a nonperfect field, smooth and regular are not equivalent. For ex-ample, let k_0 be a field of characteristic $p > 0$, let $k = k_0(t)$, and let $X \subset \mathbb{A}^2_k$ be the curve defined by $y^2 = xp - t$. Show that every local ring of X is a regular Robin Hartshorne's Algebraic Geometry Solutions Hartshorne, Chapter 1.4 Answers to exercises. REB 1994 4.1 If $f = g \text{ on } U \cup V$, then the function which is g on U and g on V is clearly regular. Therefore the union of all open sets on which f is represented by a regular function is the largest open set on which f is regular. Hartshorne, Chapter 1.4 $U \cup V \cup V \cup V$ A Hartshorne introduces the general formalism of derived functors in Chapter III.1 and then discusses the particular case of sheaf cohomology in Chapter III.2. Derived functors are very worth understanding eventually, but I'll move directly to the special case. Math 632:
