Intermediate Algebra Graphing And Functions Introduction to Graphs of Functions | Intermediate Algebra Introduction to Graphs of Functions When both the input (independent variable) and output (dependent variable) are real numbers, a function can be represented by a coordinate graph. The input is plotted on the horizontal  $x$ -axis, and the output is plotted on the vertical  $y$ -axis. Introduction to Graphs of Functions | Intermediate Algebra Designed for first-year developmental students who need support in intermediate algebra, the Fourth Edition of Intermediate Algebra retains the hallmark features for

which the Larson team is known: abundant, high-quality applications; the use of real data; the integration of visualization (figures and graphs) throughout; and extensive opportunities for self-assessment (mid-chapter quizzes ... Intermediate Algebra: Graphs and Functions, Third Edition ... In keeping with the NCTM and AMATYC standards, the authors introduce the techniques of algebra in the context of simple applications. Early and consistent emphasis on functions and graphing helps to develop mathematical models, and graphing calculators are incorporated wherever appropriate. Intermediate Algebra: Functions and Graphs (with CD-ROM ... A relation is a function if every element of the domain

has exactly one value in the range. So the relation defined by the equation  $y = 2x - 3$  is a function.. If we look at the graph, each vertical dashed line only intersects the line at one point.

a function, then we can use the notation  $f(x) = y$ . The notation  $f(x)$  is read “f of x” and should not be confused with multiplication. When working with functions, it is important to remember that  $y$  and  $f(x)$  are used interchangeably. If asked to find  $f(a)$ , we substitute the argument  $a$  in for the variable and then simplify. The argument could be an algebraic expression. The horizontal line test can be used to determine if a function is one-to-one, that is, if only one value exists for each (or) value. Calculating zeroes, domain, and range can be useful for graphing an equation, but they do not tell if it is a function.
